A unique insight into the development of one of the world's most famous tractor marques

The Nordic Tractor traces the history of tractor production in Sweden and Finland. The story goes back over 200 years to the 19th century when the industrial revolution was sweeping across Britain, and Sweden wanted to establish their own manufacturing powerhouses. This was an exciting and fast moving time for engineering and this book traces the ups, downs and eventual demise of some of the first manufacturers working to serve the particular needs of the agricultural and forestry industries in this densely forested and mountainous region. It then looks in depth at the companies who emerged from this, who learnt from their own

and others' mistakes and built on the widespread technological advances of the time to build up names for themselves in Northern parts of Europe. Today, Valtra - now owned by AGCO - stands proudly as the last remaining agricultural tractor maker in Scandinavia, but The Nordic Tractor shows where their roots lie in the establishment and history of companies such as Bolinder, Munktells, Volvo and Valmet, who all stood out as being major players in the Nordic region. Including over 100 photos, many of which have been previously unpublished, this book will appeal to those with a specific interest in Nordic tractors, Nordic engineering and general Nordic history as well as the general tractor enthusiast.

This book examines farm machinery in the context of its history, corporations, outside market forces, regulations, and challenges and opportunities. The farm machinery industry is a complex sector of the global manufacturing economy that encompasses many companies, including those who that produce tractors, combines, planting equipment, tillage equipment, and irrigation systems. While the global industry is dominated by three full-line manufacturers (Deere and Company, Case New Holland, and the Allis-Gleaner Corporation), there are thousands of other companies, including many short-line manufacturers, that also dictate the nature of the industry. In recent years, equipment built by competitors from Asia have become more common in the farmstead landscape, capturing some of the market share

U.S. manufacturers once dominated. This book examines farm machinery in the context of its history, corporations, outside market forces, regulations, and challenges and opportunities. The farm machinery industry, while contributing a small percentage to gross world product, is vitally important to another key sector of the economy—agriculture. In advanced economies, where the percentage of the labor force engaged in agriculture has been on the decline since World War II, high horsepower tractors and efficient harvesting systems are necessary to cultivate more acres with fewer workers to feed an ever-growing world population. Threats to profits in agriculture, such as natural disasters, climate change, and trade wars, increasingly challenge the profits and the viability of the farm machinery industry.
