Drug information tailored for anesthesiology and critical care; drugs used in peri-operative and critical care settings

A must-have drug reference for anesthesia providers, critical care practitioners, and all healthcare professionals involved in the care of surgical or intensive care unit patients.

An essential reference text, the fifth edition of this popular book details drugs in anaesthesia and intensive care in an A-Z format. The book describes the pharmacokinetics and pharmacodynamics of all the drugs commonly used by anaesthetists. The A-Z organisation allows rapid access to specific information on the properties and characteristics of almost 200 drugs. The new edition includes a complete revision of all the featured drugs, and the addition of key new drugs. New diagrams of particular drug structures and comparison tables aid comparison of differences within a drug class for exam revision. Improved navigation in the index enables prompt discoverability of information. Written in a concise, bullet-point style to allow quick access to information, the book contains all necessary drug references for anaesthetists in training, consultant anaesthetists, intensive care nurses, and anaesthetic assistants.

Prepared by noted critical care experts at the National Institutes of Health and leading medical centers, this handbook is a quick-reference guide to the choice and administration of drugs in critical care. It contains 126 easy-to-scan tables listing drugs of choice for specific clinical situations; dosages, dilutions, and infusion rates; and indications and adverse effects of drugs. Emphasis is on toxicities, compatibilities, and clinical considerations that would guide the choice of drug. This thoroughly updated Third Edition includes many new drugs and has an expanded section on neurologic and psychiatric therapeutics. This Third Edition is also available for PDAs. See Media Products section for details.

Offering essential, evidence-based practice guidelines specifically for the critical care setting, ICU Quick Drug Guide contains up-to-date information in a quick-access format. This portable handbook provides fast, accurate drug therapy information needed at the point of care, including expert advice throughout to help clinicians determine optimal

pharmacological therapy. Offers a quick summary of current clinical guidelines to experienced clinicians while providing a simplified, focused guide to all entry level clinicians. Covers the wide variety of issues seen in the ICU, including sepsis and septic shock, venous thromboembolism, acute heart failure, anaphylaxis, arrhythmias, asthma and COPD, pain, infections, pancreatitis and liver failure, stroke, and many more. Begins each topic with a brief discussion of the disease state followed by drug tables that compare and contrast different treatment regimens, including pharmacokinetics, pharmacodynamics, drug interactions, contraindications, and hepatic/renal dosing. Contains clinical pearls organized by the top disease states seen in the critical/acute care setting. Provides practical and essential drug information from Dr. Jennifer Pai Lee, a clinical pharmacist with expertise in critical care and pharmacokinetics/pharmacodynamics.
