Microsoft has introduced the
Graph (SPTAG) and Space
Partition Tree algorithm
visible to everyone as an
open-source GitHub project,
applied in its own Bing
search engine. The algorithm
allows the use of deep
learning models and vector
search to produce search-
based results. It involves
SPTAG understanding. The
latest surge in
advertisements and marketing
promotions for Microsoft's
new search engine viz.,

Bing, raises concerns about whether the formulas of the new engine allocate page rank to optimistic websites. It appears to be a skeptic approach if Bing will live up to expectations and become a genuine contender to Google. However, it is worth investigating how the search engines assess Bing in keeping with Google's popularity. Bing doesn't operate the same as Google, where the message of the anchor wouldn't be enough of a problem. Google counts the connection more than it counts the anchor text. Bing works in exactly the opposite way. It counts the text of the anchor more than

just the link.

In an environment where increasing amounts of information (and fake news) flood the internet on websites and social media, the information professional's job is getting harder. It is important that they are skilled at finding and using the appropriate information and assisting users in working out what information they need and the best way of getting it. Expert Internet Searching provides library and information professionals with in-depth practical information on how to search the internet

quickly and effectively to
help their users and make
their lives easier. Now
fully revised for its fifth
edition, this book covers
the basics of search before
going into detail on how to
run advanced and complex
searches using a variety of
different search engines.
This edition has been
updated to include current
trends in search, such as
social media search, fake
news, and discussion of the
authority and validity of
search results. It will
ensure that information
professionals, whether
complete beginners or more
experienced, are able to
work efficiently to obtain

accurate information in a
timely fashion. Key topics
covered include: an
introduction to the internet
and search enginesthe Google
experience and a discussion
of its
disadvantagesdirectory,
clustering and similarity
search enginesvisual and
image search
enginesspecialized search
engines incorporating
academic search and services
for childrenacademic and
other specialized search
enginesnews-based search
engines including
traditional media resources
and a discussion of fake
newssocial media search
engineshints and tips on

better searching. This book
will be useful reading for
any information professional
who is seeking to gain an in-
depth understanding of the
search process and the
search industry. It provides
a vital guide to the basics
in search, but will also
help experienced
professionals stay up to
date with the latest trends
and information in the
industry.

The Answer Machine is a
practical, non-technical
guide to the technologies
behind information seeking
and analysis. It introduces

search and content analytics
to software buyers,
knowledge managers, and
searchers who want to
understand and design
effective online
environments. The book
describes how search evolved
from an expert-only to an
end user tool. It provides
an overview of search
engines, categorization and
clustering, natural language
processing, content
analytics, and visualization
technologies. Detailed
profiles for Web search,
eCommerce search,
eDiscovery, and enterprise
search contrast the types of
users, uses, tasks,
technologies, and

interaction designs for each. These variables shape each application, although the underlying technologies are the same. Types of information tasks and the trade-offs between precision and recall, time, volume and precision, and privacy vs. personalization are discussed within this context. The book examines trends toward convenient, context-aware computing, big data and analytics technologies, conversational systems, and answer machines. The Answer Machine explores IBM Watson's DeepQA technology and describes how it is used to answer health care and Jeopardy questions.

The book concludes by
discussing the implications
of these advances: how they
will change the way we run
our businesses, practice
medicine, govern, or conduct
our lives in the digital
age. Table of Contents:

design Shows you how to use
SEO to stay "above the fold"

If you're a website owner, developer, marketer, or SEO consultant, Search Engine Optimization All-in-One For Dummies, Third Edition is the only resource you need to beat the competition.

EBOOK: Using Information Technology Complete Edition

This is a hands-on guide to building a successful real-time content marketing platform. It shows you how to develop, implement, monitor, and optimize tactics for developing a strategic plan that encompasses content, platform, and community management. Including up-to-

date tools and technologies, this book explains how to use the right tools for everything from creating search and social content to effectively using social media platforms. You will learn the exact areas where search and social overlap, and how to shift to a real-time and participatory approach in your publishing efforts.

This is a complete update of the best-selling undergraduate textbook on Electronic Commerce (EC). New to this 4th Edition is the addition of material on Social Commerce (two chapters); a new tutorial on

the major EC support
technologies, including
cloud computing, RFID, and
EDI; ten new learning
outcomes; and video
exercises added to most
chapters. Wherever
appropriate, material on
Social Commerce has been
added to existing chapters.
Supplementary material
includes an Instructor's
Manual; Test Bank questions
for each chapter; Powerpoint
Lecture Notes; and a
Companion Website that
includes EC support
technologies as well as
online files. The book is
organized into 12 chapters
grouped into 6 parts. Part 1
is an Introduction to E-

Commerce and E-Marketplaces. Part 2 focuses on EC Applications, while Part 3 looks at Emerging EC Platforms, with two new chapters on Social Commerce and Enterprise Social Networks. Part 4 examines EC Support Services, and Part 5 looks at E-Commerce Strategy and Implementation. Part 6 is a collection of online tutorials on Launching Online Businesses and EC Projects, with tutorials focusing on e-CRM; EC Technology; Business Intelligence, including Data-, Text-, and Web Mining; E-Collaboration; and Competition in Cyberspace. the following=""

Many books and courses
tackle natural language
processing (NLP) problems
with toy use cases and well-
defined datasets. But if you
want to build, iterate, and
scale NLP systems in a
business setting and tailor
them for particular industry
verticals, this is your
guide. Software engineers
and data scientists will
learn how to navigate the

maze of options available at
each step of the journey.
Through the course of the
book, authors Sowmya
Vajjala, Bodhisattwa
Majumder, Anuj Gupta, and
Harshit Surana will guide
you through the process of
building real-world NLP
solutions embedded in larger
product setups. You'll learn
how to adapt your solutions
for different industry
verticals such as
healthcare, social media,
and retail. With this book,
you'll: Understand the wide
spectrum of problem
statements, tasks, and
solution approaches within
NLP Implement and evaluate
different NLP applications

using machine learning and
deep learning methods Fine-
tune your NLP solution based
on your business problem and
industry vertical Evaluate
various algorithms and
approaches for NLP product
tasks, datasets, and stages
Produce software solutions
following best practices
around release, deployment,
and DevOps for NLP systems
Understand best practices,
opportunities, and the
roadmap for NLP from a
business and product
leader's perspective

An information retrieval
(IR) system is designed to
analyse, process and store
sources of information and

retrieve those that match a particular user's requirements. A bewildering range of techniques is now available to the information professional attempting to successfully retrieve information. It is recognized that today's information professionals need to concentrate their efforts on learning the techniques of computerized IR. However, it is this book's contention that it also benefits them to learn the theory, techniques and tools that constitute the traditional approaches to the organization and processing of information. In fact much of this

knowledge may still be applicable in the storage and retrieval of electronic information in digital library environments. The fully revised third edition of this highly regarded textbook has been thoroughly updated to incorporate major changes in this rapidly expanding field since the second edition in 2004, and a complete new chapter on citation indexing has been added. Unique in its scope, the book covers the whole spectrum of information storage and retrieval, including: users of IR and IR options; database technology; bibliographic formats; cataloguing and

metadata; subject analysis
and representation;
automatic indexing and file
organization; vocabulary
control; abstracts and
indexing; searching and
retrieval; user-centred
models of IR and user
interfaces; evaluation of IR
systems and evaluation
experiments; online and CD-
ROM IR; multimedia IR;
hypertext and mark-up
languages; web IR;
intelligent IR; natural
language processing and its
applications in IR; citation
analysis and IR; IR in
digital libraries; and
trends in IR research.
Illustrated with many
examples and comprehensively
