## Introduction Distance

Measurement (EDM) is a fundamental feature of modern surveying Total Stations. Distance measurements can be made in two modes: [1] with a reflector using an Infrared or visible laser electromagnetic wave and phase measurement or [2] 'reflectorless' using a visible laser beam and pulse time of flight.

### **Introduction | Jean M ...**

Electronic distance measurement (EDM) is a method of determining the length between two points, using phase changes, that occur as electromagnetic energy waves travels from one end of the line to the other end. As a background, there are three methods of measuring distance between two points:
