In fluid dynamics, a vortex is a region in a fluid in which the flow revolves around an axis line, which may be straight or curved. Vortices form in stirred fluids, and may be observed in smoke rings, whirlpools in the wake of a boat, and the winds surrounding a tropical cyclone, tornado or dust devil. Vortices are a major component of turbulent flow. The distribution of velocity, vorticity, as well as the concept of circulation are used to characterise vortices. In most vortices, the fluid flow

A highly original theory of how the mind-brain works, based on the author's study of single neuronal cells. In *I of the Vortex*, Rodolfo Llinas, a founding father of modern brain science, presents an original view of the evolution and nature of mind. According to Llinas, the "mindness state" evolved to allow predictive interactions between mobile creatures and their environment. He illustrates the early evolution of mind through a primitive animal called the "sea squirt." The mobile larval form has a brainlike ganglion that receives sensory information about the surrounding environment. As an adult, the sea squirt attaches itself to a stationary object and then digests most of its own brain. This suggests that the nervous system evolved to allow active movement in animals. To move through the environment safely, a creature must anticipate the outcome of each movement on the basis of incoming sensory data. Thus the capacity to predict is most likely the ultimate brain function. One could even say that *Self* is the centralization of prediction. At the heart of Llinas's theory is the concept of oscillation. Many neurons possess electrical activity, manifested as oscillating variations in the minute voltages across the cell membrane. On the crests of these oscillations occur larger electrical events that are the basis for neuron-to-neuron communication. Like cicadas chirping in unison, a group of neurons oscillating in phase can resonate with a distant group of neurons. This simultaneity of neuronal activity is the neurobiological root of cognition. Although the internal state that we call the mind is guided by the senses, it is also generated by the oscillations within the brain. Thus, in a certain sense, one could say that reality is not all "out there," but is a kind of virtual reality.

Published in 1924 and widely acknowledged as a major work of twentieth-century Latin American literature, José Eustasio Rivera's *The Vortex* follows the harrowing adventures of the young poet Arturo Cova and his lover Alicia as they flee Bogotá and head into the wild and woolly backcountry of Colombia. After being separated from Alicia, Arturo leaves the high plains for the jungle, where he witnesses firsthand the horrid conditions of those forced or tricked into tapping rubber trees. A story populated by con men, rubber barons, and the unrelenting landscape, *The Vortex* is both a denunciation of the sensational human-rights abuses that took place during the Amazonian rubber boom and one of the most famous renderings of the natural environment in Latin American literary history.

*In the Vortex of Violence* examines the uncharted history of lynching in post-revolutionary Mexico. Based on a collection of previously untapped sources, the book examines why lynching became a persistent practice during a period otherwise characterized by political stability and decreasing levels of violence. It explores how state formation processes, as well as religion, perceptions of crime, and mythical beliefs, contributed to shaping people's understanding of lynching as a legitimate form of justice. Extending the history of lynching beyond the United States, this book offers key insights into the cultural, historical, and political reasons behind the violent phenomenon and its continued practice in Latin America today.

A leading neuroscientist offers a history of the evolution of the brain from unicellular organisms to the complexity of animals and human beings today. Renowned neuroscientist Joseph LeDoux digs into the natural history of life on earth to provide a new perspective on the similarities between us and our ancestors in deep time. This page-turning survey of the whole of terrestrial evolution sheds new light on how nervous systems evolved in animals, how the brain developed, and what it means to be human. In *The Deep History of Ourselves*, LeDoux argues that the key to understanding human behavior lies in viewing evolution through the prism of the first living organisms. By tracking the chain of the evolutionary timeline he shows how even the earliest single-cell organisms had to solve the same problems we and our cells have to solve each day. Along the way, LeDoux explores our place in nature, how the evolution of nervous systems enhanced the ability of organisms to survive and thrive, and how the emergence of what we humans understand as consciousness made our greatest and most horrendous achievements as a species possible.

Wise People from every tradition have spoken about the present as the time when humanity will either destroy themselves and the planet or awaken a new consciousness that will become the foundation for the evolution of a new species. Many people are now developing the gifts to envision a positive future based on our role as conscious creators. Using Vortex Energy is one way that we can assist with the present dimensional changes. Through special hand placements, the Vortex uses the electromagnetic energy field of our bodies to polarize our energy. The harmonizing energy of the Vortex aligns our Spirit Essence to wholeness, our mind to peace, and our physical body to healing, thus shifting our energy vibration and triggering DNA changes on a cellular level so that we can adapt and survive in the Fifth World. Spider puts thirty years of working with Vortex Energy into form in this beautiful book. It's filled with nuggets. My favorite paragraph is: "We cannot assume that our own perception is best for manifesting evolutionary changes for ourselves, another person or even Mother Earth. Indeed, our personal perception may limit the possibilities of the Vortex. Therefore, once we create the Vortex, we...allow the energy to do what it needs to do. ...Trust that you will be guided during this process. Amazing things happen for those who are sincerely ready to receive the abundance of the Universe." P. 42 - Hollis Melton, herbalist and publisher of Songs of Bleeding
