Fifth-grader Ellie, known as YaYa, plans to visit a water park with her friend until her twin brother Joel, or YoYo, tells her it conflicts with Rosh Hashanah.

This thorough volume explores the possibility of detecting and identifying toxigenic fungi, able to produce secondary metabolites known as mycotoxins, which cause severe health problems in humans and animals after exposure to contaminated food and feed, having a broad range of toxic effects, including carcinogenicity, neurotoxicity, and reproductive and developmental toxicity. Beginning with a section on fungal genera and species of major significance along with their associated mycotoxins, the book continues with sections on Polymerase Chain Reaction (PCR)-based methods for the detection and identification of mycotoxigenic fungi, PCR-based

methods for multiplex detection of mycotoxigenic fungi, as well as sections on combined approaches and new methodologies. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Mycotoxigenic Fungi: Methods and Protocols* will aid researchers working in this vital field to provide insight into possible actions to reduce mycotoxin contamination of crop plants and the food/feed byproducts.

A compilation of data on capture production, aquaculture production and commodities. The complete yearbook package for each of these categories--all the key information and statistical tables--are contained on one CD-ROM. An accompanying booklet includes general notes, concepts and classifications, and summary tables as well as a pull-out map of FAO major fishing areas.--Publisher description.

This two-volume book provides a comprehensive, detailed understanding of paleoclimatology beginning by describing the "proxy data" from which quantitative climate parameters are reconstructed and finally by developing a comprehensive Earth system model able to simulate past climates of the Earth. It compiles contributions from specialists in

each field who each have an in-depth knowledge of their particular area of expertise. The first volume is devoted to “Finding, dating and interpreting the evidence”. It describes the different geo-chronological technical methods used in paleoclimatology. Different fields of geosciences such as: stratigraphy, magnetism, dendrochronology, sedimentology, are drawn from and proxy reconstructions from ice sheets, terrestrial (speleothems, lakes, and vegetation) and oceanic data, are used to reconstruct the ancient climates of the Earth. The second volume, entitled “Investigation into ancient climates,” focuses on building comprehensive models of past climate evolution. The chapters are based on understanding the processes driving the evolution of each component of the Earth system (atmosphere, ocean, ice). This volume provides both an analytical understanding of each component using a hierarchy of models (from conceptual to very sophisticated 3D general circulation models) and a synthetic approach incorporating all of these components to explore the evolution of the Earth as a global system. As a whole this book provides the reader with a complete view of data reconstruction and modeling of the climate of the Earth from deep time to present day with even an excursion to include impacts on future climate.

In August 1576, in the midst of an outbreak of the plague, the Spanish Franciscan friar Bernardino de Sahagún and twenty-two indigenous artists locked themselves inside the school of Santa Cruz de Tlaltelolco in Mexico City with a mission: to create

nothing less than the first illustrated encyclopedia of the New World. Today this twelve-volume manuscript is preserved in the Biblioteca Medicea Laurenziana in Florence and is widely known as the Florentine Codex. A monumental achievement, the Florentine Codex is the single most important artistic and historical document for studying the peoples and cultures of pre-Hispanic and colonial Central Mexico. It reflects both indigenous and Spanish traditions of writing and painting, including parallel columns of text in Spanish and Nahuatl and more than two thousand watercolor illustrations prepared in European and Aztec pictorial styles. This volume reveals the complex meanings inherent in the selection of the pigments used in the manuscript, offering a fascinating look into a previously hidden symbolic language. Drawing on cuttingedge approaches in art history, anthropology, and the material sciences, the book sheds new light on one of the world's great manuscripts—and on a pivotal moment in the early modern Americas.

Mastering the language of schooling is essential for learners to develop the skills necessary for school success and for critical thinking. It is fundamental for participation in democratic societies, and for social inclusion and cohesion. This handbook is a policy and working document which promotes convergence and coherence between the linguistic dimensions of various school subjects. It proposes measures to make explicit – in curricula, pedagogic material and teacher training – the specific linguistic norms and competences which learners must master in each school subject. It also presents the learning modalities that should allow all learners, and in particular the

most vulnerable among them, to benefit from diversified language-learning situations in order to develop their cognitive and linguistic capacities.

This book presents the fundamentals needed to understand the physical and chemical properties of alternative fuels, and how they impact refueling system design and the modification of existing garages for safety. It covers a wide range of fuels including alcohols, gases, and vegetable oils.

Fifth-grader Joel (YoYo) Silver loves playing practical jokes and making people laugh. Just when he decides to stop pranking people and focus instead on wowing a crowd with magic and juggling, his school buddies start a "challenge" club, daring each other to take part in contests and pranks. When the dares start to fall outside of Joel's comfort zone, he has to decide if he should take the risk or stand up to the pressure that his friends are putting on him. Meanwhile, it's almost Hanukkah. Joel and his twin sister Ellie (YaYa) are learning about the Maccabees, the ancient Jews who refused to give up their way of life despite enormous pressure from the Greeks. Joel is discovering that peer pressure and making good (and not-so-good) decisions can be almost as tough as being a Maccabee!
