PL/SQL is the Oracle Procedural Language extension of SQL. A PL/SQL program can have both SQL statements and procedural statements. In the PL/SQL program, the SQL statements are used to access sets of data stored in a database, while the procedural statements are used to process individual piece of data and control the program flow.

For more than 25 years, this guide has been the trusted source of information on thousands of educational courses offered by business, labor unions, schools, training suppliers, professional and voluntary associations, and government agencies. These courses provide academic credit to students for learning acquired at such organizations as AT&T, Citigroup, Delta Air Lines, General Motors University, NETS, and Walt Disney World Resort. Each entry in the comprehensive "National Guide" provides: "L "L "DBL Course title"L "DBL Location of all sites where the course is offered"L "DBL Length in hours, days, or weeks"L "DBL Period during which the credit recommendation applies"L "DBL Purpose for which the course was designed"L "DBL Learning outcomes"L "DBL Teaching methods, materials, equipment, and major subject areas covered"L "DBL College credit recommendations offered in four categories (by level of degree) and expressed in semester hours and subject area(s) in which credit is applicable."L "L The introductory section includes ACE Transcript Service information.

"In the fundamentals module, Oracle ACE Director Dan Hotka teaches developers how to work with existing code and create new programs. Along the way, students will learn both conditional and looping syntax and techniques, error handling and error processing, plus how to work with script files, procedures, functions and packages (a collection of procedures and functions). In the advanced module, Dan demonstrates how to take advantage of better options for performance, gain knowledge about the newer features of the language, as well as actually work with these same features in hands-on lab exercises. The students will learn the latest features of PL/SQL collections, triggers, and a variety of compiler features such as conditional compilation, result_cache/deterministic features for functions, autonomous transactions, optimizing compiler features, and more. Dan covers additional exception processing useful for collections. The advanced lessons include useful extensions to the error processing part with a clever use of database triggers. This advanced lessons also covers a variety of PL/SQL performance tips and the tuning and debugging tools for the PL/SQL programming environment. This LiveLessons course contains hands-on lab exercises throughout, and three common tools are used for demonstration, including SQL*Plus, Toad, and SQL*Developer. Students can use the Oracle PL/SQL development tool of their choice to do the hands-on labs with these lessons. All examples work with Oracle10, Oracle11, and Oracle12 databases, but the concepts and most of the tips apply to any Oracle database."--Resource description page.

The mission of the International Journal of Educational Reform (IJER) is to keep readers up-to-date with worldwide developments in education reform by providing scholarly information and practical analysis from recognized international authorities. As the only peer-reviewed scholarly publication that combines authors' voices without regard for the political affiliations perspectives, or research methodologies, IJER provides readers with a balanced view of all sides of the political and educational mainstream. To this end, IJER includes, but is not limited to, inquiry based and opinion pieces on developments in such areas as policy, administration, curriculum, instruction, law, and research. IJER should thus be of interest to professional educators with decision-making roles and policymakers at all levels turn since it provides a broad-based conversation between and among policymakers, practitioners, and academicians about reform goals, objectives, and methods for success throughout the world. Readers can call on IJER to learn from an international group of reform implementers by discovering what they can do that has actually worked. IJER can also help readers to understand the pitfalls of current reforms in order to avoid making similar mistakes. Finally, it is the mission of IJER to help readers to learn about key issues in school reform from movers and shakers who help to study and shape the power base directing educational reform in the U.S. and the world.

The Java® Tutorial, Fifth Edition, is based on Release 7 of the Java Platform Standard Edition. This revised and updated edition introduces the new features added to the platform, including a section on NIO.2, the new file I/O API, and information on migrating legacy code to the new API. The deployment coverage has also been expanded, with new chapters such as "Doing More with Rich Internet Applications" and "Deployment in Depth," and a section on the fork/join feature has been added to the chapter on concurrency. Information reflecting Project Coin developments, including the new try-with-resources statement, the ability to catch more than one type of exception with a single exception handler, support for binary literals, and diamond syntax, which results in cleaner generics code, has been added where appropriate. The chapters covering generics, Java Web Start, and applets have also been updated. In addition, if you plan to take one of the Java SE 7 certification exams, this guide can help. A special appendix, "Preparing for Java Programming Language Certification," lists the three exams available, details the items covered on each exam, and provides cross-references to where more information about each topic appears in the text. All of the material has been thoroughly reviewed by members of Oracle Java engineering to ensure that the information is accurate and up to date.

Discover a different way to see classical civilization in this collection of ancient Greek and Roman texts on magic and the occult. Magic, miracles, daemonology, divination, astrology, and alchemy were the arcana mundi, the "secrets of the universe," of the ancient Greeks and Romans. In this path-breaking collection of Greek and Roman writings on magic and the occult, Georg Luck provides a comprehensive sourcebook and introduction to magic as it was practiced by witches and sorcerers, magi and astrologers, in the Greek and Roman worlds. In this new edition, Luck has gathered and translated 130 ancient texts dating from the eighth century BCE through the fourth century CE. Thoroughly revised, this volume offers several new elements: a comprehensive general introduction, an epilogue discussing the persistence of ancient magic into the early Christian and Byzantine eras, and an appendix on the use of mind-altering substances in occult practices. Also added is an extensive glossary of Greek and Latin magical terms. In Arcana Mundi Georg Luck presents a fascinatingand at times startlingalternative vision of the ancient world. "For a long time it was fashionable to ignore the darker and, to us, perhaps, uncomfortable aspects of everyday life in Greece and Rome," Luck has written. "But we can no longer idealize the Greeks with their "artistic genius" and the Romans with their "sober realism." Magic and witchcraft, the fear of daemons and ghosts, the wish to manipulate invisible powersall of this was very much a part of their lives." "An excellent translation of ancient texts on the subject, but it's a lot more than that. It's a glimpse into the minds of the everyday people of the times and what made them turn, what made them stop, what made them look over their shoulders." --Courier-Gazette,(Rockland, Maine) "No one currently at work in ancient magic or related fields can remotely compare with Luck for the breadth and profundity of his knowledge of the literary texts . . . or for the humility and lightness of touch with which he conveys his scholarship." --Daniel Ogden, author of Magic, Witchcraft, and Ghosts in the Greek and Roman Worlds
