The informative and witty expose of the "bad science" we are all subjected to, called "one of the essential reads of the year" by New Scientist. We are obsessed with our health. Until now. Ben Goldacre masterfully dismantles the questionable science behind some of the great drug trials, court cases, and missed opportunities of our time, but he also goes further: out of the bullshit, he shows us the fascinating story of how we know what we know, and gives us the tools to uncover bad science for ourselves.
