The quadratic,  $y = x^2$ , is one of the two simplest polynomials. The cubic,  $y = x^3$  is another simple polynomial. Both the cubic and the quadratic go through the origin and the point (1, 1). Just two points determine a unique line. This statement means that only one line can go through any two designated points.

In The Shapes of Algebra, students will explore the relationship between algebra and geometry. Through this exploration, students will work with equations for lines and curves, and will develop an understanding of how systems of equations and inequalities can help solve problems. Students extend their earlier work in algebra and geometry by making connections between them.
