I'm trying to use my Netgear N600 as a wireless repeater for my ZYCEL C1100Z. I start with resetting both to factory settings, and my C1100Z set up regularly, it's working fine. I check its mac address and channel, it is on channel 11 and I switch it from auto to 11 so it won't change. I go to my N600 and enable wireless repeating, disable security as required for repeating, set the channel to 11 and enter mac address of the C1100Z.

Connect one end of an Ethernet cable to one of the WAN or LAN ports of your NETGEAR router, and connect the other end to a LAN port on your main (ISP) router. Your NETGEAR router is in AP mode. To log in to your AP: Connect your computer to your home network. Launch a web browser and enter the IP address of your NETGEAR router. Note: Enter the IP address that your ISP router assigned to your AP, or the IP address that you set manually in Step 6. For more information:

"The wireless router can be used as an access point/switch just by disabling DHCP and plugging into one of the 4 LAN ports but if you want to access the interface, you need to give the device an ip address on the same network."

[Wireless router to switch... - NETGEAR Communities](#)

The non-NETGEAR router repeats your existing WiFi signal instead of broadcasting a new one. You can also use your Nighthawk router as an extender and a non-NETGEAR router as your main router. Note: If you set up your Netgear router as an extender (wireless repeater), important routing functions like network traffic management are not active. We recommend using your Netgear router as your main router and purchasing an extender to increase your WiFi coverage.
