Veterinary Clinical Pathology: A Case-Based Approach presents 200 cases with questions for those interested in improving their skills in veterinary clinical pathology. It emphasises an understanding of basic pathophysiologic mechanisms of disease, differential diagnoses and recognition of patterns associated with various diseases or conditions. Topics discussed include haematology, clinical chemistry, endocrinology, acid-base and blood gas analysis, haemostasis, urinalysis, biological variation and quality control. Species covered include the cat, dog and horse, with additional material on ruminants. Cases vary in difficulty, allowing beginners to improve their clinicopathologic skills while more complicated cases, or cases treating unfamiliar topics, are included for experienced readers. This book is a helpful revision aid for those in training as well as for those in practice who are pursuing continuing education. It is also a valuable resource for veterinary nurses and technicians.

With the challenge complete and the corrupt Alpha of Coldspring defeated Fane is now free to complete the mate bond with Jacque and perform the Blood Rites. Although the challenge is done, the effects are far-reaching. Once it is known that Vasile one of the strongest Alphas in the world is in America, specifically Coldspring, TX, there is one Alpha who cannot overlook the significance of this. An Alpha who happens to share Jacque's DNA, but is this the one she needs to fear? With her mom driving and her two best friends, Jen and Sally in tow, Jacque set off for her happily ever after. She will soon realize a plan has been put in motion that will change her course and possibly tear her from Fane's grasp forever. It will take a wolf pack, her mother's love, her two best friend's unrelenting determination, her own will to survive and the undying love of her mate to bring her home. The question remains, if she fights, if she endures, who will she be, what will be left once she is back in her mate's arms?

A mysterious man with murder on his mind is using newspaper personal ads to attract unsuspecting women, and Nancy Drew is determined to track him down before it is too late.

Twelve years old when she enters the court of King Henry VII, where she is plunged into a world of politics and intrigue, Bess of Hardwick eventually discovers that, for a woman of substance, power and possibility are endless.

The first adventure in the Nebula Award-winning author's "masterful SF trilogy" about the attempted colonization and terraforming of the planet Venus (Publishers Weekly). Iris Angharads, a determined, independent woman, sets herself one massive goal: to make the poison-filled atmosphere of Venus hospitable to humans. She works day and night to realize her dream, with only one person sharing her passion, Liang Chen. It seems impossible to make Venus, with its intolerable air and waterless environment, into a paradise, but Iris succeeds. And in doing so, she also creates a powerful dynasty, beginning with her first born, Benzi Liangharad.

Venus and Mercury have long been regarded as difficult targets for amateur observers, but advances in commercially-made telescopes have brought them within the skills of observers of only moderate experience. Peter Grego's fascinating book presents an up-to-date, detailed description of the history and geology of the so-called inferior planets, and provides the latest, most useful advice on observing and recording them with commercially-available telescopes and cameras. The book also offers a wealth of detailed practical information on every aspect of observing, from safely targeting the two planets, through visual observing, to sketching and electronic imaging.

This book will inspire and equip parents to help their hurting teens. The well-known and widely respected author team of Dr. Catherine Hart Weber and Dr. Arch Hart helps parents discover and identify nervousness, irritability,

negativity, and low self-esteem, and determine whether their teen's symptoms are caused by physical problems, raging hormones, stress, or depression. Offering practical suggestions, spiritual solutions, and encouragement, this resource helps parents and teens face their own feelings of fear, anger, and hurt.

Venous valves rank among the smallest and most delicate organs of the human and animal bodies - so why devote an entire book to them? We were induced to do so by several reasons. First of all we would point out the clinical significance of venous valves. In the pathogenesis of a number of widespread diseases, such as varicose veins or the post-thrombotic syndrome, venous valves are involved as the underlying cause or at least a factor contributory to the symptoms. According to Taheri et al. these venous diseases occur ten times more frequently than arterial obliterations. Incompetence of venous valves also plays a causal role in varicocele, the most frequent cause of male infertility. But not only pathogenetic reasons induced us to write this book. In more recent times there has been a growing tendency to reconstruct functional valve disorders therapeutically; several surgical methods have been developed, which are critically reviewed in this book. It was our aim to sum up existing knowledge with respect to structure and function of venous valves and to expand that knowledge by findings of our own. Examinations of semi-thin sections and unilayered en-face preparations have hardly been published so far, and systematic studies of the ultrastructure by electron-microscopy were not to be found in the literature. We are very grateful, therefore, to Dr. Silvana Geleff for having undertaken such a study upon our suggestion.

Psychology of the Image outlines a theoretical framework bringing together the semiotic concepts developed by Charles Peirce, the sociological insights of Ervin Goffman and the psychoanalytic ideas of Jacques Lacan. Image studies in fashion, advertising, photography, film studies and psychology have been influenced by these theorists in significant ways. The framework presented helps the reader understand how these ideas relate to the study of different domains of the image: the internal imagery of dreams, external images such as the photograph and image processes which span both contexts, e.g., images we have about ourselves. The topics discussed are organised into three themes. The first considers mental imagery, including sound and dreams. The second addresses the interdependent nature of internal and external images, e.g., the gendered self and social identity. In the third theme, attention turns to external images including television, film, photography, the computer and the internet. Psychology of the Image will be of interest to undergraduates, postgraduates, lecturers and researchers in the fields of psychology, media studies and sociology.
