repair it was fairly hot
and reliable. It used
sleeve bearings inside a
long tube to support the
armature and a wick
system to supply
lubrication.

Guide rod for armature
(GR, fig. 3) This electric
current for the WICO
EK Magneto was
created by pulling the
armature away from the
magnet coil cores. The
armature was connected
to a rocker arm that was

activated by a sliding bar. (see fig. 4) This armature movement created a current in the windings around the magnet cores.
